

Available in a range of application specific friction formulations POWERSTOP pads offer long lasting, quiet and clean operation without sacrificing braking performance.

TITANIUM INFUSED CERAMIC BRAKE DISC PADS

Ti TANIUM 4WD

OUR LATEST FORMULATION

Chosen specifically for Australian 4WD applications, this Premium Formulation has Titanium infused throughout the friction material. This provides consistent braking performance over a much wider temperature range with strong Anti-Fade properties and increased 'bite'.

KEVLAR INFUSED CERAMIC BRAKE DISC PADS

Utilising an advanced Hybrid Kevlar Ceramic formulation, Kevlar Infused general purpose pads provide Ultra Quiet operation with Low Dust and no black residue. Kevlar is long lasting while being soft on rotors, extending service life.

STREET COMPOSITE BRAKE DISC PADS

Higher Friction Coefficient for drivers wanting even more 'Bite' from their brakes. These Pads use the same Anti-noise shim technology as the rest of the POWERSTOP range and are ideal for both heavy vehicles and 4WD's.
